

Keywords/Questions:

Hot reload

Notes: In this session firstly we git clone the basic from github of appbrewry

Hot reload: This is a very cool thing in this we just right STLESS IN vs code and create a stateless widget in wg=hich after return we add our own code for a quich reload response

Container widget
padding
edgeinsets
margin

In session 41 we got to know about container widget - (to layout a single piece of widget like text or a imageunder the body comes the

container which padds its child contains diffeent feaitres like padding , alignment, major axis alignment and many more.

row
Column
ListView

Row and column: Row and column are used to display containers in the limited space .

CircleAvatar
text style

mi card- Circleavatar was uesd to incorporate the circular area where the image is to be put

Then we used font syles downloading from google fonts and used in our app by letting it i pubspec file very carefully with prioper indentation.

Icons

To add icons to the app we took a container i which had a row as a child in which we have children containing icons text and other different decorations.

text

Card

Card widget in flutter is the widget which allows us to make a tile like structure which help us to store our information like in this app icon+ detail.

List tile

List tile is used to make it more attractive used as a child in card
